

Create cluster [Info](#)

Cluster configuration

Cluster identifier

This is the unique key that identifies a cluster.

The identifier must be from 1-63 characters. Valid characters are a-z (lowercase only) and - (hyphen).

What are you planning to use this cluster for?

- ☐ **Production**
Configure for fast and consistent performance at the best price.
- ☒ **Free trial**
Configure for learning about Amazon Redshift. This configuration is free for a limited time if your organization has never created an Amazon Redshift cluster.

 When the free trial ends, delete your cluster to avoid incurring charges at **on-demand rate** [↗](#) for compute and storage. If you want to take a final snapshot of your cluster and store the snapshot on an S3, our on-demand rate applies.

Calculated configuration summary

dc2.large | 1 node

High performance with fixed local SSD storage

Compute

2 vCPU (gen 2) / node x 1 = 2 vCPU

Estimated on-demand compute price

\$2,190.00/year

\$0.25/node/hour

Estimated reserved (1 year)

\$1,407.00/year

\$0.075/node/hour

36% discount

Estimated reserved (3 year)

\$879.667/year

\$0.05/node/hour

60% discount

Storage capacity

160 GB x 1 nodes = 160 GB

Sample data [Info](#)

 Sample data is loaded with your Redshift cluster.

Tickit (28 MB)

Tickit is the sample data set that uses a sample database called TICKIT. Tickit contains individual sample data files: two fact tables and five dimensions.

Database configurations

Admin user name

Enter a login ID for the admin user of your DB instance.

The name must be 1-128 alphanumeric characters, and it can't be a [reserved word](#) .

Query data

tools, and Amazon Redshift, using JDBC or ODBC drivers.

Cluster

Cluster identifier

Copy JDBC URL

Copy ODBC URL

tools, and Amazon Redshift. We recommend using the new Amazon Redshift-specific drivers for better performance and scalability.

Driver

JDBC 4.2 without AWS SDK (.jar)

Download driver
