

Create dynamic scaling policy

We give the domain name should be same as name of the domain in our freenom acc. (I don't have any freenom acc and I don't know it wil be costed or not, that's y I didn't create it) As shown in the above snap, after giving the domain name, hosted zonw will be created. once we the zone there are some NS's(NameServer) copy the servers one by one from this zone to freenom management tools.

create a record

After creting record , copy the record and paste in to chrome.

it'll be the same our web page/server
